

To whom it may concern. I am an avid listen to the XM Radio. and I believe it would be an awful waste of technology to limit such wonderful technology, due to the lack of foresight in the regular radio conglomerations. This is a wonderful asset to truck drivers like myself, also I am sure that travelers of all kinds greatly appreciate the news weather traffic and all other programing in question. I one remembers back regular radio was the way to go then TV came along and guess what radio is still here. They both transmit weather traffic news etc. so why not let XM be listen to by all so everyone who wants to may listen. Thanks for your time.
